

Key Features:

- Hydraulic clamp & auto feed
- Models available to cut 6" - 84" OD pipe
- Powerful hydraulic drive wheel
- ROV and diver compatible
- Strong aluminium frame

Mirage Diamond Wire Cutter

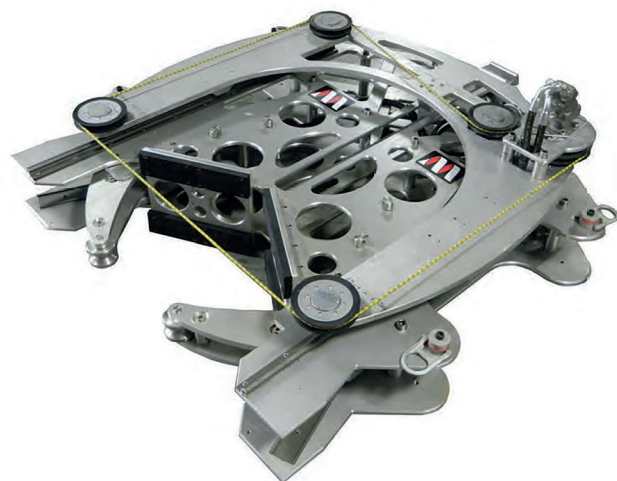

Cutters and Grinders

The Mirage Diamond Wire Saw (MDWS) is designed for underwater cutting on multistring casings, piles, platform legs and wellhead. The diamond wire cut is ideal for quick cutting through dissimilar materials and resisting compressive forces.

MDWS is an abrasive cutting technology that is extremely effective in different subsea environments. The wire cutter allows circular cutting on all sides, preventing the wire from getting pinched on materials that would otherwise damage lathe and mill type tooling. Customized saws are available by special order.

While the machine can be used topside, it is not considered a cold cutting method when used for surface operations.

The machine is supplied complete with packing list and manual. Optional accessories include: three function hydraulic control panel, hydraulic power unit, six pass hydraulic hose reels and spares kit. ROV operating and hot stab packages.
